

American Tank Gauge

The Automated Gauge system operates by measuring the fluid level indicated on the outside of the gauge. The transmitter sends these levels to a receiver, where they are read by a flow computer or other equipment connected to the receiver. Each receiver can support up to 20 transmitters.

Protocols Supported	Tank Gauge, Modbus RTU
Serial Ports Supported	RS-232, RS-485
Frequency	2.4GHz
Max distance (line of sight)	1/2 mile
Transmitter battery life (typical)	1 year
Receiver current (max)	50 mA
Battery	10.8V, 9000mAh
Gauge Length Options	8 - 30 ft.
